Loading Your Gaylord the Right Way

A few simple steps protect your equipment, keep our team safe, and make pickup day go smoothly. Follow these tips when filling your container.

1 Keep Heavy Items Off Fragile Ones

Never load heavy equipment on top of fragile items like laptops and tablets. Set fragile pieces aside or on top, not underneath.

2 Protect the Screens

Broken screens are much harder to recycle. Face monitor and TV screens toward the outside of the box, or place two screens facing each other for protection.

3 Cords & Cables Are Welcome

We accept cords, cables, and connectors of all kinds — no need to sort or remove them before loading.

4 Handle Batteries with Care

When possible, leave batteries inside battery backups and laptops. If loose, tape the terminals or set them aside separately. Never cross terminals or toss them loose into the box — damaged terminals and batteries can start a fire.

5 Set Items In — Don't Throw Them

Place each item gently into the container instead of tossing it in. A little care here goes a long way toward keeping equipment intact and recyclable.

6 Have Any Questions? Call or Text

If you have any questions, our team is happy to help. Call or text Jack at **269-294-0525.**

What You Can Count On From Us

Reliable

We show up, communicate clearly, and follow through with dependable pickups and timely reporting.

Customizable

Programs can be tailored around your equipment volume, pickup schedule, data destruction needs, and reporting requirements.

Easy

Simple communication, flexible scheduling, and responsive support help reduce the burden on your internal team.
